## Author Index Volume 226 (2009)

- Andreeva, E.M.**, see **Muratova, G.V.** 77– 83
- Angot, Ph.**, see **Février, C.** 228–245
- Antal, I.** and **J. Karátson**, Mesh independent superlinear convergence of an inner–outer iterative method for semilinear elliptic interface problems 190–196
- Antonelli, L.**, **P. Belardini**, **P. D'Ambra**, **F. Gregoretti** and **G. Oliva**, A distributed combustion solver for engine simulations on grids 197–204
- Arnold, M.**, see **Schlegel, M.** 345–357
- Bai, F.-S.**, see **Sun, Y.** 2– 9
- Bai, Z.**, see **Li, Y.-T.** 10– 21
- Bai, Z.-Z.**, **L. Reichel** and **Z.-C. Shi**, Preface 1– 1
- Bai, Z.-Z.**, **I.S. Duff** and **J.-F. Yin**, Numerical study on incomplete orthogonal factorization preconditioners 22– 41
- Belardini, P.**, see **Antonelli, L.** 197–204
- Cao, J.-W.**, see **Sun, J.-C.** 125–135
- Christov, C.I.**, **R.S. Marinova** and **T.T. Marinov**, Does the stationary viscous flow around a circular cylinder exist for large Reynolds numbers? A numerical solution via variational imbedding 205–217
- D'Ambra, P.**, see **Antonelli, L.** 197–204
- Dai, H.**, see **Yuan, Y.-X.** 42– 49
- Duff, I.S.**, see **Bai, Z.-Z.** 22– 41
- Duff, I.S.**, The design and use of a sparse direct solver for skew symmetric matrices 50– 54
- Faragó, I.**, see **Zlatev, Z.** 187–189
- Faragó, I.**, **Á. Havasi** and **Z. Zlatev**, Richardson-extrapolated sequential splitting and its application 218–227
- Février, C.**, **J. Laminie**, **P. Pouillet** and **Ph. Angot**, On the penalty-projection method for the Navier–Stokes equations with the MAC mesh 228–245
- Galántai, A.** and **C.J. Hegedűs**, Hyman's method revisited 246–258
- Gáspár, C.**, Multi-level meshless methods based on direct multi-elliptic interpolation 259–267
- Georgiev, K.**, **N. Kosturski**, **S. Margenov** and **J. Stary**, On adaptive time stepping for large-scale parabolic problems: Computer simulation of heat and mass transfer in vacuum freeze-drying 268–274
- Gregoretti, F.**, see **Antonelli, L.** 197–204
- Gu, T.-X.**, **X.-Y. Zuo**, **X.-P. Liu** and **P.-L. Li**, An improved parallel hybrid bi-conjugate gradient method suitable for distributed parallel computing 55– 65
- Hannukainen, A.**, **S. Korotov** and **T. Vejchodský**, Discrete maximum principle for FE solutions of the diffusion-reaction problem on prismatic meshes 275–287
- Havasi, Á.**, see **Faragó, I.** 218–227
- Hayami, K.**, see **Yin, J.-F.** 177–186
- Hegedűs, C.J.**, see **Galántai, A.** 246–258
- Karátson, J.**, see **Antal, I.** 190–196
- Knoth, O.**, see **Schlegel, M.** 345–357
- Korotov, S.**, see **Hannukainen, A.** 275–287
- Kosturski, N.**, see **Georgiev, K.** 268–274
- Kosturski, N.**, see **Margenov, S.** 288–297
- Laminie, J.**, see **Février, C.** 228–245
- Lewis, B.** and **L. Reichel**, Arnoldi–Tikhonov regularization methods 92–102
- Li, P.-L.**, see **Gu, T.-X.** 55– 65
- Li, Y.-T.**, **Z. Bai** and **Y. Su**, A two-directional Arnoldi process and its application to parametric model order reduction 10– 21
- Lin, F.-R.**, see **Lu, L.-Z.** 84– 91
- Liu, X.-P.**, see **Gu, T.-X.** 55– 65
- Lu, L.-Z.**, see **Wang, Y.-Y.** 66– 76
- Lu, L.-Z.**, **M.K. Ng** and **F.-R. Lin**, Approximation BFGS methods for nonlinear image restoration 84– 91
- Margenov, S.**, see **Georgiev, K.** 268–274
- Margenov, S.** and **N. Kosturski**, MIC(0) preconditioning of 3D FEM problems on unstructured grids: Conforming and non-conforming elements 288–297
- Marinov, T.T.**, see **Christov, C.I.** 205–217
- Marinova, R.S.**, see **Christov, C.I.** 205–217
- Muratova, G.V.** and **E.M. Andreeva**, Multigrid method for solving convection-diffusion problems with dominant convection 77– 83
- Nagy, B.**, Analysis of the biological clock of *Neurospora* 298–305
- Naumov, M.** and **A.H. Sameh**, A tearing-based hybrid parallel banded linear system solver 306–318
- Ng, M.K.**, see **Lu, L.-Z.** 84– 91
- Oliva, G.**, see **Antonelli, L.** 197–204

- Penenko, V.** and **E. Tsvetova**, Discrete-analytical methods for the implementation of variational principles in environmental applications 319–330
- Poulet, P.**, see **Février, C.** 228–245
- Pulova, N.V.**, A pointwise projected gradient method applied to an optimal control problem 331–335
- Reichel, L.**, see **Bai, Z.-Z.** 1– 1
- Reichel, L.**, see **Lewis, B.** 92–102
- Repin, S.I.**, see **Tomar, S.K.** 358–369
- Sameh, A.H.**, see **Naumov, M.** 306–318
- Schlegel, M., O. Knoch, M. Arnold** and **R. Wolke**, Multirate Runge–Kutta schemes for advection equations 345–357
- Shi, Z.-C.**, see **Bai, Z.-Z.** 1– 1
- Shishkin, A.**, see **Shishkina, O.** 336–344
- Shishkina, O., A. Shishkin** and **C. Wagner**, Simulation of turbulent thermal convection in complicated domains 336–344
- Simon, P.L.**, see **Zlatev, Z.** 187–189
- Sogabe, T., M. Sugihara** and **S.-L. Zhang**, An extension of the conjugate residual method to nonsymmetric linear systems 103–113
- Song, Y.**, see **Wang, L.** 114–124
- Stary, J.**, see **Georgiev, K.** 268–274
- Su, Y.**, see **Li, Y.-T.** 10– 21
- Sugihara, M.**, see **Sogabe, T.** 103–113
- Sun, J.-C., J.-W. Cao** and **C. Yang**, Parallel preconditioners for large scale partial difference equation systems 125–135
- Sun, Y., Y.-H. Tao** and **F.-S. Bai**, Incomplete Gröbner basis as a preconditioner for polynomial systems 2– 9
- Tao, Y.-H.**, see **Sun, Y.** 2– 9
- Tomar, S.K.** and **S.I. Repin**, Efficient computable error bounds for discontinuous Galerkin approximations of elliptic problems 358–369
- Tsompanopoulou, P.** and **E. Vavalis**, Analysis of an interface relaxation method for composite elliptic differential equations 370–387
- Tsvetova, E.**, see **Penenko, V.** 319–330
- Vavalis, E.**, see **Tsompanopoulou, P.** 370–387
- Vejchodský, T.**, see **Hannukainen, A.** 275–287
- Wagner, C.**, see **Shishkina, O.** 336–344
- Wang, L.** and **Y. Song**, Preconditioned AOR iterative methods for  $M$ -matrices 114–124
- Wang, Y.**, see **Wu, Y.-J.** 166–176
- Wang, Y.-Y.** and **L.-Z. Lu**, Preconditioned Lanczos method for generalized Toeplitz eigenvalue problems 66– 76
- Wang, Z.-Q.**, Optimization of the parameterized Uzawa preconditioners for saddle point matrices 136–154
- Wei, M.** and **J. Zhang**, On perturbations of some constrained subspaces 155–165
- Wolke, R.**, see **Schlegel, M.** 345–357
- Wu, Y.-J., Y. Wang, M.-L. Zeng** and **A.-L. Yang**, Implementation of a modified Marder–Weitzner method for solving nonlinear eigenvalue problems 166–176
- Yang, A.-L.**, see **Wu, Y.-J.** 166–176
- Yang, C.**, see **Sun, J.-C.** 125–135
- Yin, J.-F.** and **K. Hayami**, Preconditioned GMRES methods with incomplete Givens orthogonalization method for large sparse least-squares problems 177–186
- Yin, J.-F.**, see **Bai, Z.-Z.** 22– 41
- Yuan, Y.-X.** and **H. Dai**, A generalized inverse eigenvalue problem in structural dynamic model updating 42– 49
- Zeng, M.-L.**, see **Wu, Y.-J.** 166–176
- Zhang, J.**, see **Wei, M.** 155–165
- Zhang, S.-L.**, see **Sogabe, T.** 103–113
- Zlatev, Z., I. Faragó** and **P.L. Simon**, Large scale scientific computations: Editorial introduction 187–189
- Zlatev, Z.**, see **Faragó, I.** 218–227
- Zuo, X.-Y.**, see **Gu, T.-X.** 55– 65
